

WALLFLOWERS

Two areas that are known to attract litter include pathways/shortcuts and spaces that look uncared for. What happens when you combine these features?

They become litter magnets. This can be seen in the paths next to John Coles and Pewsham Park.

- The grassy, weedy space next to the wall can be sown with wildflowers and plants known to attract pollinators. The University of Bristol Urban Pollinators Project is a good resource.
- Bristol street artists can demonstrate to the youth of Chippenham how to turn walls into art – not just places for mindless graffiti.
- By giving the community ownership of the space, it is hoped that it will become more vibrant and cared for.

Putting litter in its place.
Full stop.
